CITRIX Thin Client Solution

- Utilizes Existing IMACS Application Software
- Maintains IMACS business and processing logic without rewriting application.
- Requires purchase of CITRIX client and server software, Computer Associates Multi-Instance Client Manager, and Oracle Server Runtime
- Requires additional Web Server Hardware
- Potential Printing Issues
- Does not Web Enable IMACS Application

Web Enabling IMACS using Oracle

- Oracle Designer 2000 CASE tool is capable of modeling the data and creating the user interface
- Requires all of the IMACS business and processing logic to be redesigned and rewritten, and associated to Oracle Form based elements
- Form application server running Form Routine software is required for Oracle web architecture.
- Requires additional Web Server hardware
- The network traffic will substantially increase as a result of the interaction between the client, Form server and the database server.

Web Enabling IMACS using CA Web Enablement Tools

- Utilizes existing IMACS Application Software
- Maintains all of the IMACS business and processing logic without rewriting application.
- Requires purchase of CA Cool:Gen Web Enablement tool option, and Oracle Server Runtime
- Cool:Gen Web Enablement tool was designed specifically for applications developed using the Cool:Gen CASE tool
- Requires additional Web Server hardware
